## MAGNETIC LIGHT STRIPS

### What's it for and what are the benefits?

Teckentrup LED strips illuminate the entire garage space creating a safer and well lit environment. Due to their low power consumption, the LED strips are an efficient alternative to conventional lighting systems. With the help of a motion detector, the LED strips switch on automatically when you enter the garage creating the best possible view for parking in and out, for repairs or when carrying your shopping from the car into the house.

### How does it work?

These clever LED strips are easily positioned on the underside of the door tracks with magnetic tape. They flood the garage with 6000 lumens of light (equivalent to around 400 watts of incandescent light!) Four linked LED strips are activated by the kits' motion sensor or infra red remote control.

### What does it need to make it work?

It is an addition to the Teckentrup DRIVE / DRIVE PRO 500 & DRIVE /DRIVE PRO 600 garage door motors.

### What else works with it?

It operates as a stand-alone unit or can be fitted with other Teckentrup DRIVE accessories.

### How much is it?

See the current retail price list.
