### What's it for and what are the benefits?

It automatically opens your garage door a short distance to allow air to circulate, reducing the high humidity levels typical after parking a wet car in your garage. Reducing humidity lessens the likelihood of mould and mildew forming in your garage.

### How does it work?

It uses a humidity sensor connected to the Motor control unit to monitor humidity levels. It automatically signals the garage door motor to open the garage at high humidity levels and close when levels have lowered.

### What does it need to make it work?

It is an addition to the Teckentrup DRIVE /DRIVE PRO 600 garage door motor (Not compatible with the DRIVE / DRIVE PRO 500).

### What else works with it?

It operates as a stand-alone unit or can be fitted with other Teckentrup DRIVE accessories.

### How much is it?

See the current retail price list.
