BIDIRECTIONAL COMMUNICATION

What's it for and what are the benefits?

No more worrying about if you remembered to close your door or not. The Pearl Vibe transmitter can query the doors position and let you know it's either shut or open for peace of mind.

How does it work?

The Pearl Vibe transmitter option vibrates in your hand confirming that the control unit has received your command. It can also confirm if your door is open or closed using bidirectional communication between the opener and transmitter.

What does it need to make it work?

It is an addition to the Teckentrup DRIVE / DRIVE PRO 500 & DRIVE /DRIVE PRO 600 garage door motors.

What else works with it?

It operates as a stand-alone unit or can be fitted with other Teckentrup DRIVE accessories.

How much is it?

See the current retail price list.
