

## Thresholds... what are my options?

Our CarTeck side hinged garage doors come with a 3-part lipped aluminium threshold as standard but you can also choose to have the optional aluminium strip threshold... Here's how they are different:

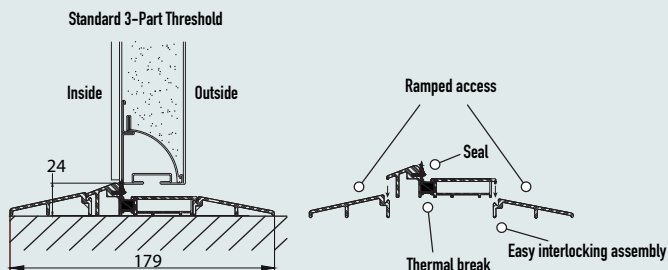

### Standard 3-part lipped aluminium threshold

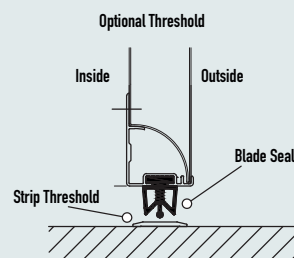

WATCH HOW TO FIT  
THE THRESHOLD  
- SCAN ME!

The standard threshold is a quick-interlocking 3-part stepped construction that provides easy ramped access to your garage. It includes a thermal break, helping reduce heat transfer and a lip seal to help provide a barrier to dust and debris and assist weather protection.

The centre section is pre-fitted to the door frame, all you need to do is clip in the front and back sections on site.

### Optional aluminium strip threshold

The aluminium profile on a side hinged garage doors provides a simple low-profile threshold. The bottom of each door leaf has a simple finned seal that sits on the strip threshold when closed.

The door is shipped with a transit strip to hold the frame legs together and the aluminium threshold is supplied loose for on site fitting.

This option is list price less £50.

Note: If you've ordered a door with an aluminium strip threshold in place of the standard, remove the transit strip prior to installation. To do this, undo the transit angle screws shown left and remove the transit angle.

### What performance can I expect from the threshold

Thresholds only function effectively when fitted to a level floor that is in good condition. A new threshold won't fix a poor floor! If you want to know more about what you can expect from the performance of a side hinged garage door, scan the qr code to the right to visit the Honesty Page!
