

Making a one-man CarTeck sectional garage door install possible, even on big doors!

At Teckentrup, we always keep our installers in mind. That's why we have a number of clever solutions that make your job quick and easy when fitting one of our garage doors.

### Introducing... The CarTeck DRIVE "Lifter" – the installers mate!

When it comes to tensioning a sectional garage door you have two choices...

Manually lift the door up, which on large doors is a two person job...

...OR use the CarTeck DRIVE "Lifter"!

The CarTeck DRIVE "Lifter" is a simple solution for commissioning a sectional garage door without needing a second pair of hands. That's why we call it "The Installers Mate"! The lifter works for all door sizes – it has enough grunt to lift even a double door without springs!

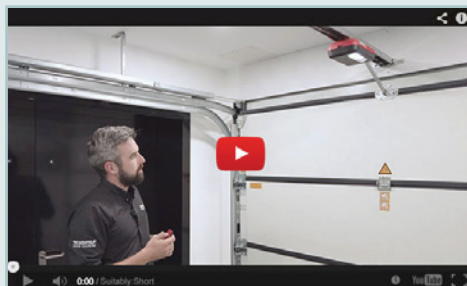

### How is it done?

Install the door ready for tensioning, fit your CarTeck DRIVE using the Lifter head as a temporary motor and power-raise the unsprung door ready for tensioning. Safe and simple.

Watch this video from Dan to see exactly how the CarTeck DRIVE "Lifter" works...
