

Optional triple point locking on CarTeck side hinged garage doors...

The active leaf is available with three point locking as an option for enhanced security. The additional locks provide extra strength to combat attempts to force them apart. Triple point locking is achieved by two pins at the top and bottom of the door that extend into the inactive leaf and the latch and dead bolt at the handle point.

Keeps for the top and bottom lock pins and the main lock latch are adjustable. Should the door seals compress over time, the adjustment allows you to tighten up the closing of the door against the seals. See how easily they are adjusted by scanning the QR code below and watching the video from Dan...

The top and bottom lock keeps are machined off-centre and can be inverted to allow adjustment.

Lock pin keep

The latch keep is adjusted in or out by releasing the retaining screws.

Main lock keep

Adjusting the strike plate & keeps

Paired with our anti-drill, anti-pick lock cylinder, which is standard on all doors and certified to BS EN1303 Cylinder Security Grade 2, security is tough and dependable.
